Striving for Excellence: Learning for Life

December 2025

Dear Parents/Carers,

## Social Media and Online Safety Risks

There has been a lot of news recently about Australia's new ban on social media for young people. While it can be good for them to work online to connect, create and explore we need to be aware of how it can expose them to unsuitable content and experiences, causing them to be unsafe.

I wrote to you last week with reminders about keeping our children safe in their use of technology as we approach the Christmas period but wanted to update you further. Just this week, I have been alerted to some concerns about the dangers of specific websites and apps that have affected young people locally and it is important that we share this information with you.

There are many apps and websites that allow young people to connect safely, with the appropriate age restrictions and privacy settings in place. However, we are aware of some websites that are exposing children to the risk of connecting with random strangers through live video calls. In 2023, a website called Omegle was closed down due to reports of young people being matched with random strangers, very often adults, and consequently exposed to inappropriate and dangerous material and also connecting with people who were putting them at risk of being exploited.

Recently, we have heard of copycat websites that are based on the same model and are again putting children at huge risk of being exposed to contact and content from adults who are accessing these websites. One has a similar name to Omegle, along with others such as OmeTV and Monkey. These all set an age limit of 18+ but it is very easy for younger children to bypass this.

We feel it is vital that parents and carers are as informed as possible to the potential dangers of these websites and apps and the emotional impact it has had on young people who have accessed these. We have included a link to the Internet Matters website and factsheets about similar sites to help you keep as informed and talk to your children about online safety.

Helpful advice for families:

- Ask your child what websites they are accessing
- Check your child's device history
- Ask your child if they are using any live chat apps
- **Don't mention Omegle directly** as we don't want to signpost it to the children if they are not aware of it.
- **If your child tells you that they have been on Omegle – please ask them about it to find out more**
- Check for apps and their age restriction
- Look for apps that allow any sort of live chat and remove them from their phone
- Block inappropriate apps or websites in your security settings on your child's device

I hope this information is of help to you but please feel free to share it with other friends and family members if they think it would be helpful.

Kind regards,

Mrs Mynott  
Assistant Headteacher/Designated Safeguarding Lead

# What Parents & Carers Need to Know about

# OMETV

## WHAT ARE THE RISKS?

OmeTV is another app which encourages users to 'make friends from all around the world'. People can search profiles by age and gender and send direct messages or photos. However, the app is primarily used for video calls. When using this feature, users are connected at random, although only their country of origin is shared. People can then either choose to move on to the next chat or can stay in that call for as long as they wish.

## STRANGER DANGER

While young people generally know not to share personal information with strangers, the safety of their home and the distance offered by technology can make them feel more relaxed and uninhibited. Combined with the fact that OmeTV provides a webcam function – and anonymity – it can be an easy way for groomers to gather information, ask to connect on other social media platforms, or potentially request intimate images.

## EXPLICIT CONTENT

Unfortunately, there are a lot of users who use OmeTV's webcam feature to expose themselves. While users can swipe to the next call quickly, it's not something that can be filtered out completely – so young people could easily be exposed to highly inappropriate images.

## REPORTING DIFFICULTIES

When video calling, the other person's username is often hidden and therefore they can't be blocked or reported. There is a 'Report Abuse' tab at the bottom of the video, but the speed with which calls can swipe past can make it difficult to use this system. There's also little evidence to suggest that offenders are dealt with appropriately (through warnings or account termination, for example).

## AGE VERIFICATION

17+

Although the site states that users must be 18 or over, there's no way to verify this, and it's easy to use an existing Facebook account to log in, or for users to set up a fake account. To access OmeTV, users simply need to press a button confirming they're an adult, which means it's likely many users will claim to be much older than they are.

## VIDEO RECORDING

When young people are chatting live on a webcam, they could be coaxed by others into doing things they don't feel comfortable doing, or persuaded that no harm can come from it. What they don't know is whether the other user is recording them. These videos could then be used to embarrass or blackmail them, or they could be kept by a potential online predator.

## LIMITED PARENTAL CONTROLS

OmeTV has very limited parental controls. There is a 'safe mode', but this is of little practical use given that explicit content isn't filtered out. While the site lists several rules and regulations, there are few apparent ways to enforce them or restrict what users can see or do.

## Advice for Parents & Carers

### FOLLOW AGE GUIDELINES

OmeTV has an age recommendation of 18 and over, which suggests the developers are aware that it may facilitate adult content. It's important to adhere to the age guidelines and try to restrict access to the app for younger users. If you find it on an under-18's device, talk to them about the potential risks and explain why they probably shouldn't be using it.

### DISCUSS THE DANGERS

Maintain communication with your child about online safety and empower them to protect themselves. Simply deleting an app from their device impacts their independence and can cause resentment. Instead, highlight news reports of predators exposing themselves to children on the internet, and discuss what they should do if asked for explicit images.

### DISCOURAGE CHATS WITH STRANGERS

Remind your child of the dangers of talking to strangers online. The anonymity OmeTV offers, plus its webcam function, makes it an attractive place for groomers to network and create inappropriate content. Explain that your child may see something which upsets them – and that it's a crime for anyone to expose themselves to a young person online.

Hi!

### ENABLE PARENTAL CONTROLS

Regardless of how responsible your child may be, it's essential to use parental controls on their device. It's easy for young people to get lured in by others, feeling they've built up a trusting friendship and being coaxed into doing things they wouldn't normally do. Ensure in-app purchases aren't enabled on their device, and emphasise that they can always talk to you about anything online that worries them.

# What Parents & Carers Need to Know about MONKEY

AGE RESTRICTION  
**17+**

(Although the lack of age verification means that someone younger could easily log in with a fake date of birth)

Also known as Monkey Cool, this platform aims to fill the gap left by Omegle (which has now shut down) by placing users in random video chats with strangers. Participants use their mobile number and Snapchat username to connect to the service, where they can make matches, message other people and join group chats. The mobile version has been removed from the App Store due to safety concerns, but iPhone owners can still access the site via their web browser. The app remains available on Google Play, where its listing claims that Monkey has more than 30 million users worldwide.

## WHAT ARE THE RISKS?

### AGE-INAPPROPRIATE CONTENT

The app claims to use AI to detect sexual content or activity that violates its policies, along with having a 24/7 moderation team. However, reports in the media continue to indicate that explicit content remains commonplace on Monkey (including sexually graphic or violent material) and is therefore accessible to anybody who uses the app – including those aged under 18.

### CONTACT WITH STRANGERS

The obvious risk in accepting random video chat partners is that users cannot know what or who they will see on their next connection. Talking to strangers is, of course, potentially dangerous – especially for children who might be persuaded to meet up with these people offline. The app lets users find each other by location, increasing the chances of a child being matched with a stranger from their local area.

### IN-APP SPENDING

While Monkey is free to download, it nevertheless offers in-app purchases promising to unlock access to premium features. For example, users who wish to make use of 'Knock Knock chat' (Monkey's text-based messaging option), rather than the app's Chatroulette-style random video calling feature, will need to pay to be able to do so.

### INTRUSIONS ON PRIVACY

According to Monkey's privacy policy, personal information (such as name, profile picture and date of birth), user-contributed content (any photos, texts, videos and screenshots shared) and each user's browser and IP address are collected. That is a considerable amount of data for Monkey to gather on its users – and all of this information is shared with third parties.

## Advice for Parents & Carers

### DISCUSS THE DANGERS

Even if you're comfortable with your child using Monkey, it's still important to talk about the potential dangers. It's crucial, for instance, that young people recognise the risks that stem from video chatting with strangers; that they understand not to share identifying information (like their street or school name); and that they know what to do if they are exposed to inappropriate content.

### RESTRICT IN-APP PURCHASING

If your child is accessing Monkey via an Android device, you can prevent them from making in-app purchases through the device's settings. If you do allow your child to use the site, we'd recommend that you enable this feature: young people have been known to spend significant amounts of money in their desire to unlock more features in apps such as this.

### REPORT INAPPROPRIATE CONTENT

Monkey states in the safety section of its site that "people are given the power" and that, to a large extent, Monkey is "self-governing." If a user is exposed to sexually explicit or inappropriate content on the platform, they can select the 'police' emoji in the top right corner of their screen to submit a report for Monkey's moderation team to review.

### SPOT THE SIGNS

If you're concerned that your child is spending too much time on Monkey – or that they may have been exposed to inappropriate or distressing content – it's important to watch for potential indications that they've been affected emotionally. They could be unusually irritable or unable to concentrate, for example, or failing to complete their homework or even to eat regular meals.
